Reading imaging studies requires a physician’s undivided attention to identify the clues that will form the basis of a diagnosis. Patient context from the EHR is tremendously helpful to guide the radiologist’s clinical decisions. Yet EHRs are cumbersome and full of hard-to-search data in the form of clinical notes. In addition, radiologists may be provided with vague or incomplete “reason for exam” information as a starting point.

With high workloads and only a few minutes to interpret each study, reading physicians do not have time to scroll through pages of unstructured EHR data in order to acquire a broader clinical context.

How we can help

IBM Watson Imaging Patient Synopsis is a radiologist-trained AI solution that extracts relevant patient information from the EHR and compiles it into a single-view summary in the PACS ... in seconds. With more than 12 years of expertise in AI, IBM offers a pioneering vendor-neutral solution that can understand the clinical meaning of both structured and unstructured EHR data, such as clinical reports and referring notes, giving insightful patient context to reading physicians through their own PACS.
Patient Synopsis equips providers with deeper insights from EHR data and seamlessly integrates with the radiologists’ workflow, all in a cost-effective SaaS solution.

**With Patient Synopsis you can:**

**Understand the deeper clinical context**
Benefit from AI technology that can extract clinical information from content in clinical reports and referring notes that conventional IT systems can’t decipher.

**Access highly relevant data**
Find out the true “reason for exam” behind the imaging order by having quick reference to the referring physician’s notes and the patient’s past episodes of care.

**Gain information without disruption**
Automatically load the patient summary in context when opening a study from the PACS worklist.

**Leverage an IT-friendly solution**
Avoid the need for data scientists or extra IT staff by implementing a vendor-neutral solution with support from the IBM Watson Health cloud to manage data load and result delivery automatically.

**About Watson Health Imaging**

Watson Health Imaging, a segment of IBM Watson Health, is a leading provider of innovative artificial intelligence, enterprise imaging and interoperability solutions that seek to advance healthcare. Its Merge branded enterprise imaging solutions facilitate the management, sharing and storage of billions of patient medical images.

With solutions that have been used by providers for more than 25 years, Watson Health Imaging is helping to reduce costs, improve efficiencies and enhance the quality of healthcare worldwide.
