

Diving Services

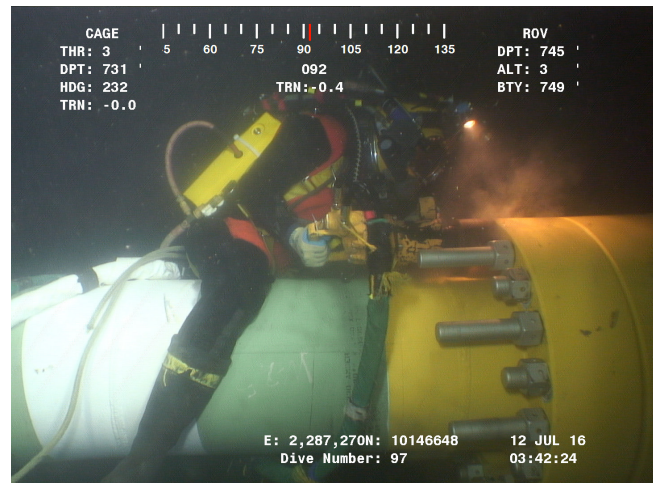

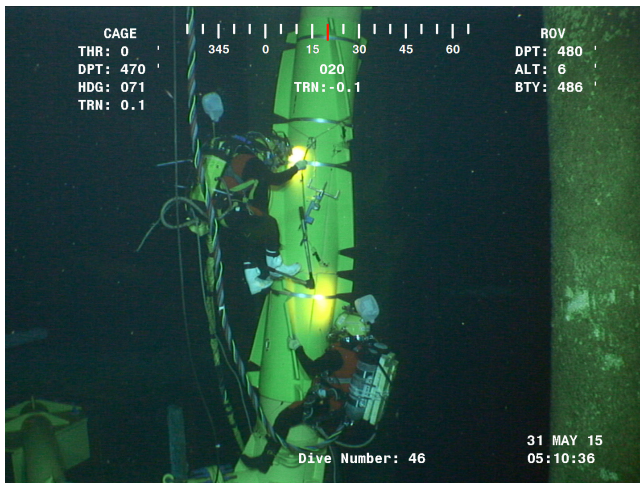

We are a leading provider of air, mixed gas, and saturation diving services. We own and operate specialized equipment used to perform a wide range of offshore platform repairs, inspections services, pipeline repairs and re-routes, grouting repairs, and specialized hyperbaric and wet welding.

Our diving operations are supported by our fleet of premier remotely operated vehicles (ROV) and one of the youngest diving support vessel (DSV) fleets in the Gulf of Mexico. Our four-point and dynamically positioned (DP) air and saturation diving vessels enable operators to complete operations more efficiently and safely.

Welding Services

Our certified welders perform construction and maintenance welding services including underwater wet and dry hyperbaric welding repairs. Our divers are experienced in grouting, platform repair, pipeline inspection and maintenance, and pipeline plug and abandonment.

To provide the highest level of customer confidence, in the Gulf of Mexico and worldwide, we can deploy equipment and divers that not only meet the standards of the International Marine Contractors Association (IMCA), the International Association of Oil & Gas Producers (IOGP), and the Association of Diving Contractors International (ADC), but that also meet all recognized industry standards and your project requirements.
