

Oceanair™ Ride Disinfectant System

Ensuring the safety and wellbeing of your customers

The Oceanair system provides a fully-automated, safe, and cost-effective solution for disinfecting ride systems. The innovative design and eco-friendly approach eliminates common pathogens such as coronaviruses and norovirus from vehicle surfaces. Oceanair seamlessly integrates with existing operations to ensure guests feel confident every time they board one of your attractions.

Oceanair is configured to work with all ride systems and delivers a solution that is completely safe for both guests and employees. The system not only minimizes risks to health and safety, but reduces the number of personnel required to perform manual cleaning tasks.

FEATURES

Eliminates time-consuming and costly manual cleaning

Ensures consistency and thoroughness of disinfecting activities

Eco-friendly system suitable for use with all ride systems

Oceanair™ Ride Disinfectant System

Ensuring the safety and wellbeing of your customers

Our Oceanair system meets the needs of park owners seeking a solution that both minimizes the impact of disinfecting ride vehicles on operations and eliminates the negative effect of cleaning agents on air quality.

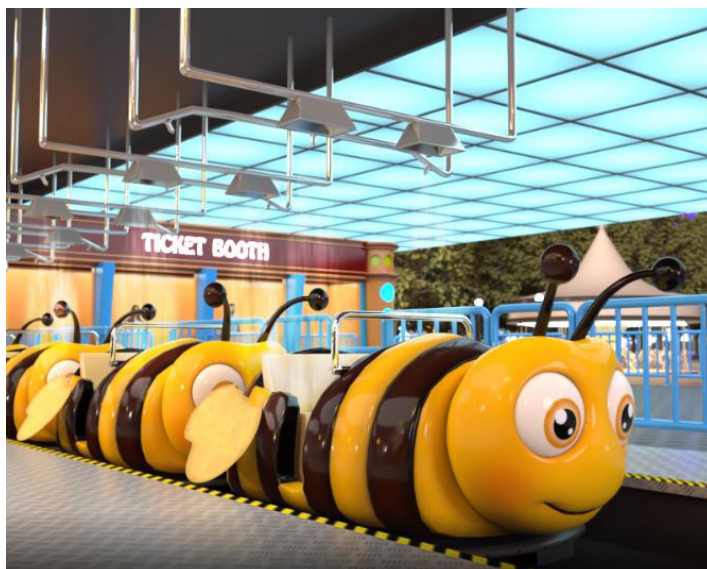

The automated system uses a sanitizing agent pumped into reservoirs and applied through fogger nozzles, treating high-contact areas including seats, pads, and restraints. After the agent's minimum recommended contact time, an air knife blower removes any residue. The entire process is completed in motion between load and unload or in a stop station, dependent on the attraction.

The Oceanair system not only increases customer confidence in the cleanliness of

surfaces, but ensures your facilities deliver an enjoyable experience with increased and predictable throughput at each attraction.

Features

- » Agnostic to type of sanitizing product selected
- » Configured to work with all ride systems (dark rides, roller coasters, children's rides)
- » Ensures highest possible level of attraction uptime
- » Seamlessly integrated with existing operations
- » Does not affect air quality or cause eye or skin irritation
- » Easily installed in existing space using minimal infrastructure
- » Easy to maintain
- » Hands-free solution
