

Mission Support Center

Optimize operations and increase collaboration

Our Mission Support Center provides a base for supporting offshore operations while using remotely-located personnel. As technology and our approach to completing operations evolve, we remain at the forefront by taking a strategic, calculated approach to deliver solutions that provide efficiencies, de-risk operations, and enable customers to benefit from both small and large scale cost savings.

FEATURES

Increases efficiency using a remote operations base

Provides access to subject matter experts and specialists

Reduces mobilization costs and carbon footprint

Mission Support Center

Optimize operations and increase collaboration

Using the Mission Support Center can be advantageous for a wide spectrum of customers. From those who want enhanced interaction to those wanting to demonstrate a forward-thinking, carbon footprint reducing approach, the Mission Support Center meets diverse customer needs.

The advantages of using the Mission Support Center are numerous.

- » Supported by our field-proven remote piloting and control technology (RPACT) which de-risks operations with supervised, automated ROV operation
- » Strong 4G mobile network facilitates operations with very low latency
- » Leverages the best use of time, mobilization costs, and expertise to efficiently support operations
- » Offers significant value for operators who have multiple operations
- » Increases safety by reducing offshore deployments
- » Supports increased engagement between client representatives and project specialists
